

# CANOPY

## wiring system

Wiring System by Onok Lighting is an innovative technical lighting solution that can be installed with complete freedom, allowing personalised designs from a single surface-mounted canopy. Unlike other systems, Wiring System enables the configuration of a full lighting solution without the need to recess the power source, making it ideal for spaces where this option is not feasible. The cables are arranged across the ceiling using discreet nodes or tensioners that act as key points in the lighting layout. This distribution is entirely flexible and can be customised to meet the client's needs and preferences.

\*You can customise the finish by contacting us.
